Q3 Comprehensive SEO Report

TESTER AquaTerra

Executive Summary

AquaTerra's current digital presence presents significant opportunities for growth, with the site audit revealing a foundational score of 32/100 across the audited domain, indicating critical technical and on-page SEO issues that require immediate attention. The six identified issues are impacting crawlability, indexation, and overall search engine performance, limiting the brand's ability to compete organically. Additionally, AquaTerra currently holds a 0.0% mention rate across LLM visibility scans, meaning the brand is absent from AI-generated responses and conversational search results — a rapidly growing discovery channel. Addressing both the technical SEO deficiencies and the LLM visibility gap represents a significant upside opportunity to establish AquaTerra as an authoritative, discoverable brand across all modern search surfaces.

Key Wins:

• Site is live and crawlable, providing a clean baseline from which to build a scalable SEO foundation

• Early-stage audit identification means critical issues can be resolved before they compound further ranking losses

• Brand is at the ground floor of LLM visibility, allowing a proactive strategy to be established before competitors dominate AI-driven search results

Top Opportunities:

• Resolve all 6 identified technical site audit issues to improve the overall health score from 32/100 and unlock stronger crawl and indexation performance

• Develop authoritative, structured content that increases AquaTerra's mention rate in LLM and AI-powered search platforms from 0.0% toward meaningful brand visibility

• Expand site architecture beyond the current single-page footprint to target a broader set of relevant keywords and topical authority clusters

• Implement schema markup and entity optimization to signal brand relevance to both traditional search engines and large language models

• Establish a content and digital PR strategy to generate third-party mentions and citations that fuel both backlink acquisition and LLM training data presence
